

OIL & GAS

Tekfen Engineering is a global professional services provider delivering high quality management and technical services in Oil & Gas sector which is vividly expanding due to the increasing need of natural resources.

Our specialist process engineering team comprises expertise in advance simulation and analysis of oil and gas processes and provides fundamental core services for the development of detailed engineering. The mechanical and piping engineering team is one of the key disciplines providing hydraulic design and detailing of pressure vessels and heat exchangers. With the support of our instrumentation and control division we provide expertise in process monitoring, control and automation systems, fire and gas detection systems, SCADA, surveillance systems, field instrumentation and actuated valves, telecommunication systems and fieldbus systems.

In the overall Tekfen Engineering being a multidisciplinary engineering company provides all aspect of engineering services for the Oil & Gas sector.
